email: info@cfbooth.com

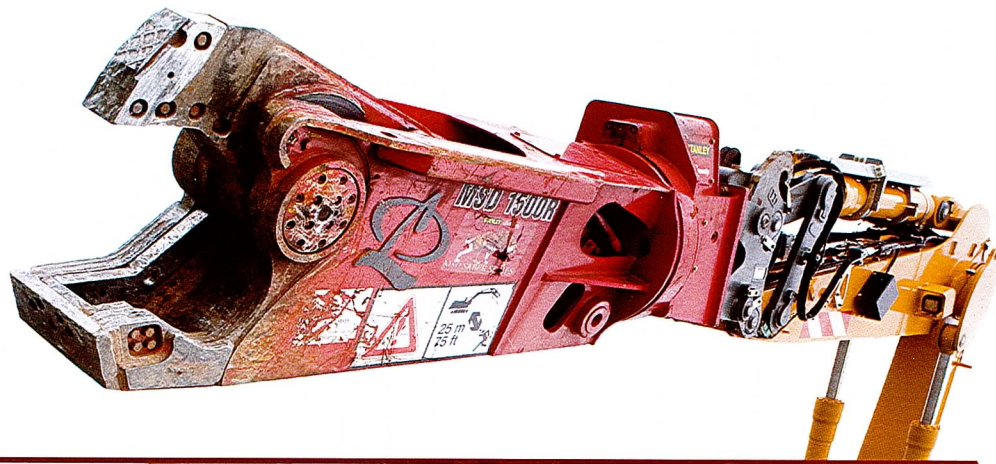

CF Booth Ltd have invested in two new Material Handling Machines, which have also been specifically designed to include Overhead Tower Dismantling with the associated Safety and Environmental features in mind for this type of work.

The 30 tonne Liebherr 360 Wheeled, Multi-User is capable of Shearing and processing steel of over 30mm thickness. A standard 25 tonne L6 Tower can easily be processed in less than 1 day. Utilising the "Quick Change System" a clean and safe exchange of attachments can be made. As a one man operation this versatile machine can cut, sort, and load, allowing the operator to remain in the cab.

The multi user includes a shear, sorting/loading grab and magnet to sweep clean any residues, such as nuts, bolts and other ferrous metals from the site on completion of operations. The machine reduces Health & Safety and Environmental issues, compared with the "Burning Method" e.g. no fire risk, cleaner environment with no smoke, reduced labour, no manual handling and reduced plant such as Bowsers, Telehandlers and Cherry Pickers for height work. Above all the standard L6 tower can be cut in half the time, and with no percentage metal loss associated with burning. Many other Health and Safety and Environmental features have been added.

Some of these features are:

Bunded Tool Skip

Road Licensed,

Tracker,

Rear/front outrigger support with Dozer Blade,

Rubber Pads for the outriggers to protect Trackway,

Hydraulic Pipe protection,

Floodlights on Boom with additional front and rear Headlights,

Operators Cab with Bullet-Proof Windscreen and Roof glass,

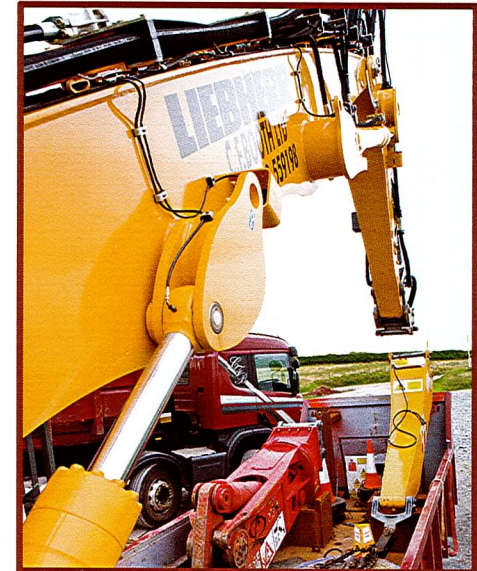

Rear space monitoring with camera,

Beacon,

Automatic Security Shutters and Immobilisation,

Weigh Load System,

Machine levelling device,

C.F. BOOTH LIMITED

One of the leading metal recycling companies in the UK.

C.F. Booth has grown over the years from a local metal trader into one of the largest independently run recycling companies in Europe.

The company is a member of the BMRA (British Metals Recycling Association) and is ISO 9001:2000 approved for all its current melting processes such as ingot manufacture, copper shot production, and the supply of cast slab, forged billet, rod and bar. C.F. Booth is also a BIR Gold Member

C.F. Booth was established in 1920 by Clarence Frederick Booth and since that time has continued to be passed down through the generations of the Booth family.

Ken Booth Snr acquired the business from his father Clarence and he is still currently serving an active role within the company, but the bulk of the workload is now managed by Ken Snr's two sons, James & Ken Jnr.

Ken Booth Jnr's two sons Jason (buying) & Scott (selling) oversee the buying and selling of all materials within C.F. Booth Ltd, who are then in turn overseen by their father Ken Jnr.

C.F. Booth Ltd has grown to occupy a large area of land at its Armer Street head office and is continuously moving forward in all areas of metal recycling and manufacturing.

The company predominantly functioned as a scrap yard, importing and exporting small quantities of a limited number of metals, but is now importing and exporting a large variety of materials Worldwide. The company manufactures a wide range of copper based ingots which are also sold to companies all over the World. Most recently the company have begun manufacturing forged parts, mainly for use in the marine industry since the demise of Alfred Ellis Ltd.

C.F. Booth Ltd is the head company of the C.F. Booth group of companies. The companies which come under this group include:

C.F. Booth (Doncaster) - Metal Recycling

C.F. Booth Engineering - CNC Machining

C.F. Booth Stockholders - Steel Stockholders & Cutting services

Northfield Aluminium - Manufacturers of Aluminium Ingots

Rotherham Stainless & Nickel Alloys - Stockists of Stainless Steels & Special Alloys

Demex Ltd - Demolition & Waste Management

C.F. Booth - Metal Recyclers of Ferrous & Non Ferrous Metals

Manufacturers of Ingot, Shot, Billet & Slab

Recyclers of Rolling Stock.

We buy and sell all grade of metals.
